

Comments on the course given during the summer of 2023.

I also found this course from Dr Roush as an excellent material to get panoramic overview of the extend of the topics you could cover in Astronomy.

BM, high school teacher.

The course was great! I'm a novice in the field of astronomy but have learned quite a bit. Some of the slides were "over my head" but I went back and tried to digest them. I also enjoyed the interaction with the other participants. Thanks, again!

SM, high school teacher

The course structure was well organized, informative and thoughtfully designed. The visual aids and class discussions enriched the learning experience and helped to our understanding of celestial phenomena. The course gave us a panoramic view of the topics covered in Astronomy and open our eyes to the wonders of our universe. I highly recommend the course for future students and amateur people seeking for a foundation in Astronomy education.

Thank you for providing such an enriching educational experience in Astronomy.

FR, professional

I was looking for an on-line introductory course in astronomy and came across your course. I feel it is an excellent review of the history of astronomy, and also of current knowledge. I also liked that you made available recordings of the lectures, so I could still view them when I wasn't able to see them in real time due to schedule conflicts that I had. The only comment I have is that some of the lectures could probably merit two lectures instead of one, as they contained a lot of material. I thoroughly enjoyed your course!

BK, professional.

The topics and coverage were very relevant and a great way to understand astronomy. The course covers a wide variety of topics at the right depth - so that novices and beginners get a deeper appreciation for the subject. Your style of teaching is great - because you stop and ask if anyone has questions and leave room to discuss questions. Overall, I enjoyed the course a lot and felt it was extremely valuable to me as an amateur astronomer, and to my high-school daughter in her pursuit of the subject for her science Olympiad competition. I would easily attend such sessions again - to get a better understanding and to refresh my knowledge. I found these very valuable and informative!

RG, parent

I liked the class very much. I learned something new in every class. I liked your PowerPoints and student questions and answers. It was amazing to see that students join the class from all over the world. Thanks for the very informative sessions.

SH, 10th grade student

Thank you very much for the interesting and valuable lectures. I enjoyed the topics very much and learned a lot. I really appreciate your efforts to make astronomy available to the public.

BI, 10th grade student.

This is A—M-- from India, and it was a great experience to attend this course because I came to know so many topics and compared to other courses I have attended, this was one of the most interactive and productive ones. I would really love to attend any other courses made like this. It was really fun!

AM. 9th grade student.

One of the aspects I loved most about this course was the discussions between the different participants. Although they weren't handpicked, I was impressed by the incredible diversity of people who came together to learn and share their ideas – from educators like your friend or high school teachers to students of all ages, like me. For that reason, I really appreciate your efforts to make the course accessible to such a wide variety of people.
